

Messrs. Dürselen KG was founded in 1966. Another company was established in the same house in 1987, Dürselen GmbH, which sells the products manufactured by the KG. Since 1998 there is also the Dr. Anja Dürselen GmbH & Co. KG, which is specialised in the manufacturing of parts in large dimensions.

Our buildings with 3500 m² production area and 200 m² office area are close to the motorway A61. Our buildings are equipped with a crane capacity of 50 t (for the largely dimensioned parts).

We employ 34 on our staff at present, of whom 26 work in production. 24 production employees are skilled workers, and some of them are with the company for more than 25 years. They are used to take responsibility for permanently changing manufacturing tasks.

Ancillary work is also undertaken in addition to the company's own production range comprising the CORTA machines for the graphic industry (CORTA paper drilling machines). We work for customers from different industrial branches, for example, textile machine construction, packaging machine construction, machine tool construction, pharmaceutical machines, machines for the automobile parts supply industry, air travel and space travel industries. Our activities for these companies start with the production of precision parts and end with special ready-to-operate machines according to customers drawings or our own design.

First and foremost is the quality of our products. Quality assurance is carried by the individual members of staff after each production step and at the end by a independent operating quality assurance team, right up to thorough testing on our CNC measuring centre.

Our customers expect a high degree of flexibility, punctual delivery, competitiveness and quality from us. Our modern machinery and equipment as well as our experience gained in the construction of special machines ensure - for CORTA paper drilling machines, too - any innovations required, special wishes being met, uniform and high quality and efficient production.
